

Non-contrast Enhanced MRI in Stroke

Meiyun Wang MD, PhD

**Henan Provincial People's Hospital
Zhengzhou, China**

Disclosure

I have no financial interests or relationships to disclose with regard to the subject matter of this presentation.

Henan Provincial People's Hospital

≈ Henan General Hospital

- 1 hundred million people in Henan Province
- 6500 in-patient beds

- **Where is it?**

- **How does it look like?**

Henan Provincial People's Hospital

The second in-patient building

The third in-patient building

One of the out-patient buildings

The Research and Training building

Henan Medical Imaging Center

Henan Medical Imaging Center

河南省人民医院影像科 河南省医学影像中心

2018.1.8

Henan Medical Imaging Center

- 240 staff
- 14 MR scanners:
 - 3.0T × 10 (Prisma, Skyra, Trio, Verio, MR750...)
 - 1.5T × 4 (Sempra, 360, HDe)
- 16 CTs
- 1 PET-MR, 1 PET-CT
- Intra-operative CT-MR-DSA system
- MR-guided Focused Ultrasound (Neuro+Body)
- 20 DSA.....

Henan Medical Imaging Center

- **Average workload / Day**
 - 700 MRI cases
 - 1300 CT cases
 - 20--30 PET-CT cases
 - 1500 X Ray cases
 - 130 DSA cases
- **Collaborations: Clinical trials, big data, artificial intelligence(AI)...**

Non-contrast Enhanced MRI in Stroke

Advancement of MR in Neuroimaging

➤ Conventional MRI

- T2w, T1w, FLAIR, DWI: Structural information

➤ Advanced MRI

- Functional MRI

- DTI / DKI, Perfusion, BOLD, MRS, SWI...

- Molecular MRI

- Exogenous contrast agents
- Endogenous contrast agents (protein, glucose) : No contrast agent, no delivery issue, no toxicity

Today's Agenda

- **Strategically Acquired Gradient Echo (STAGE)**
- **A Length and Offset Varied Saturation (LOVARS)**

Today's Agenda

- **Strategically Acquired Gradient Echo (STAGE)**
- **A Length and Offset Varied Saturation (LOVARs)**

Susceptibility weighted imaging (SWI)

- **SWI** demonstrates a unique contrast caused by the difference of tissue susceptibility
- SWI is extremely sensitive in detecting intracranial hemorrhage and microbleeds
- SWI can be used to measure oxygen saturation and iron content

SWI: Early detecting hemorrhage within ischemia

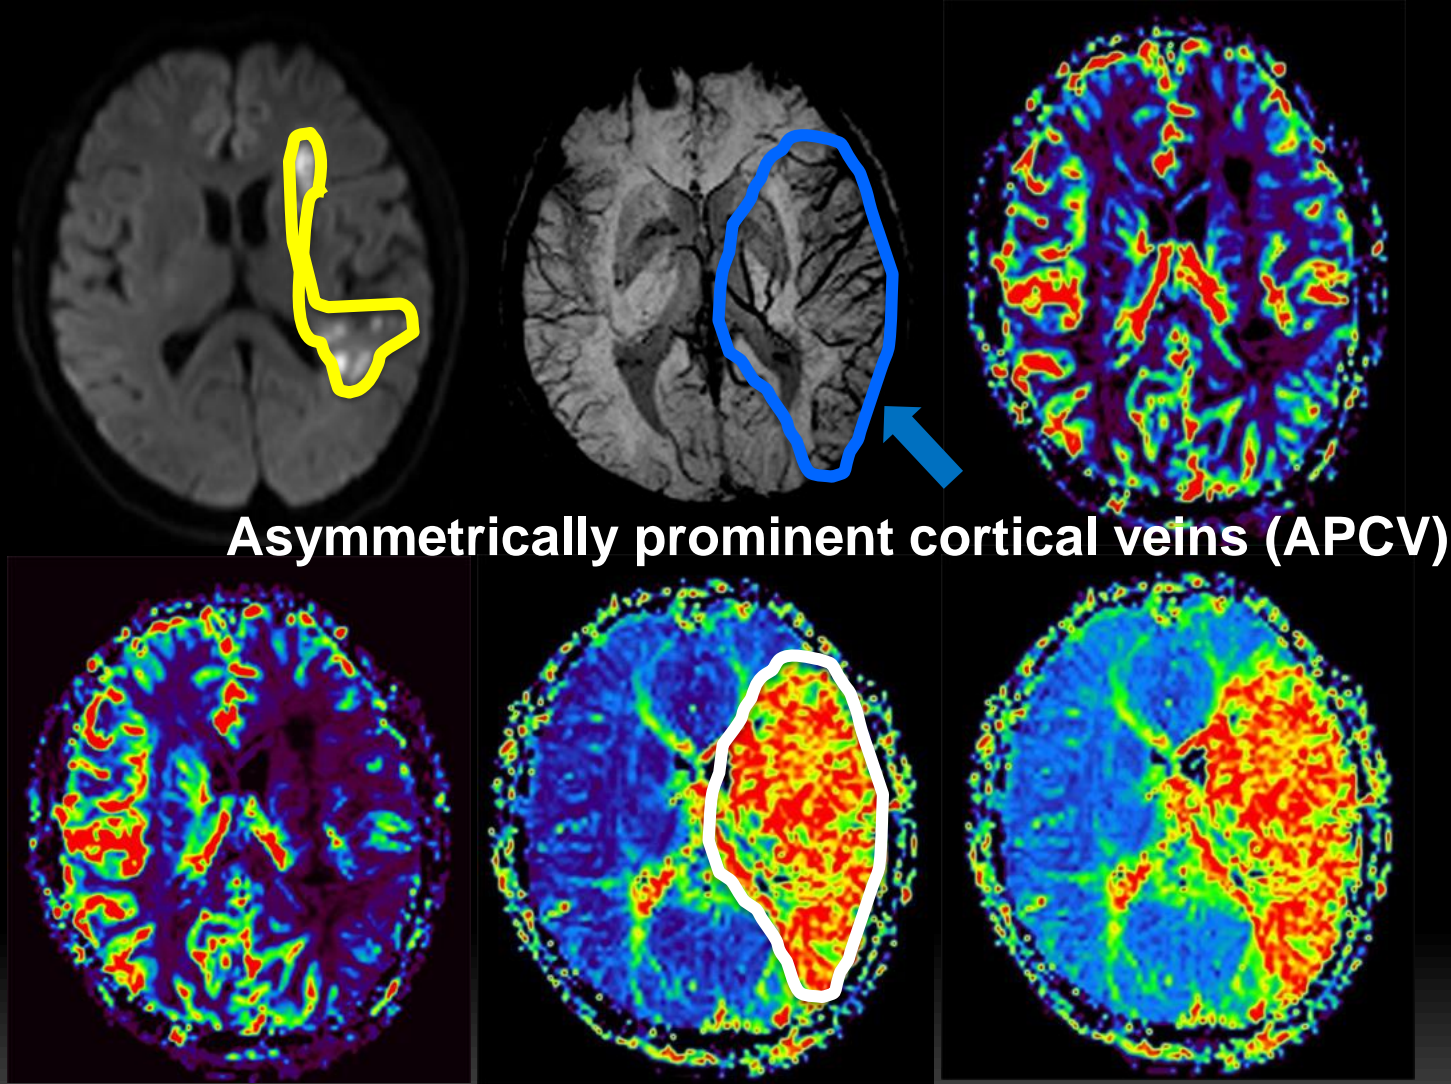

FLAIR

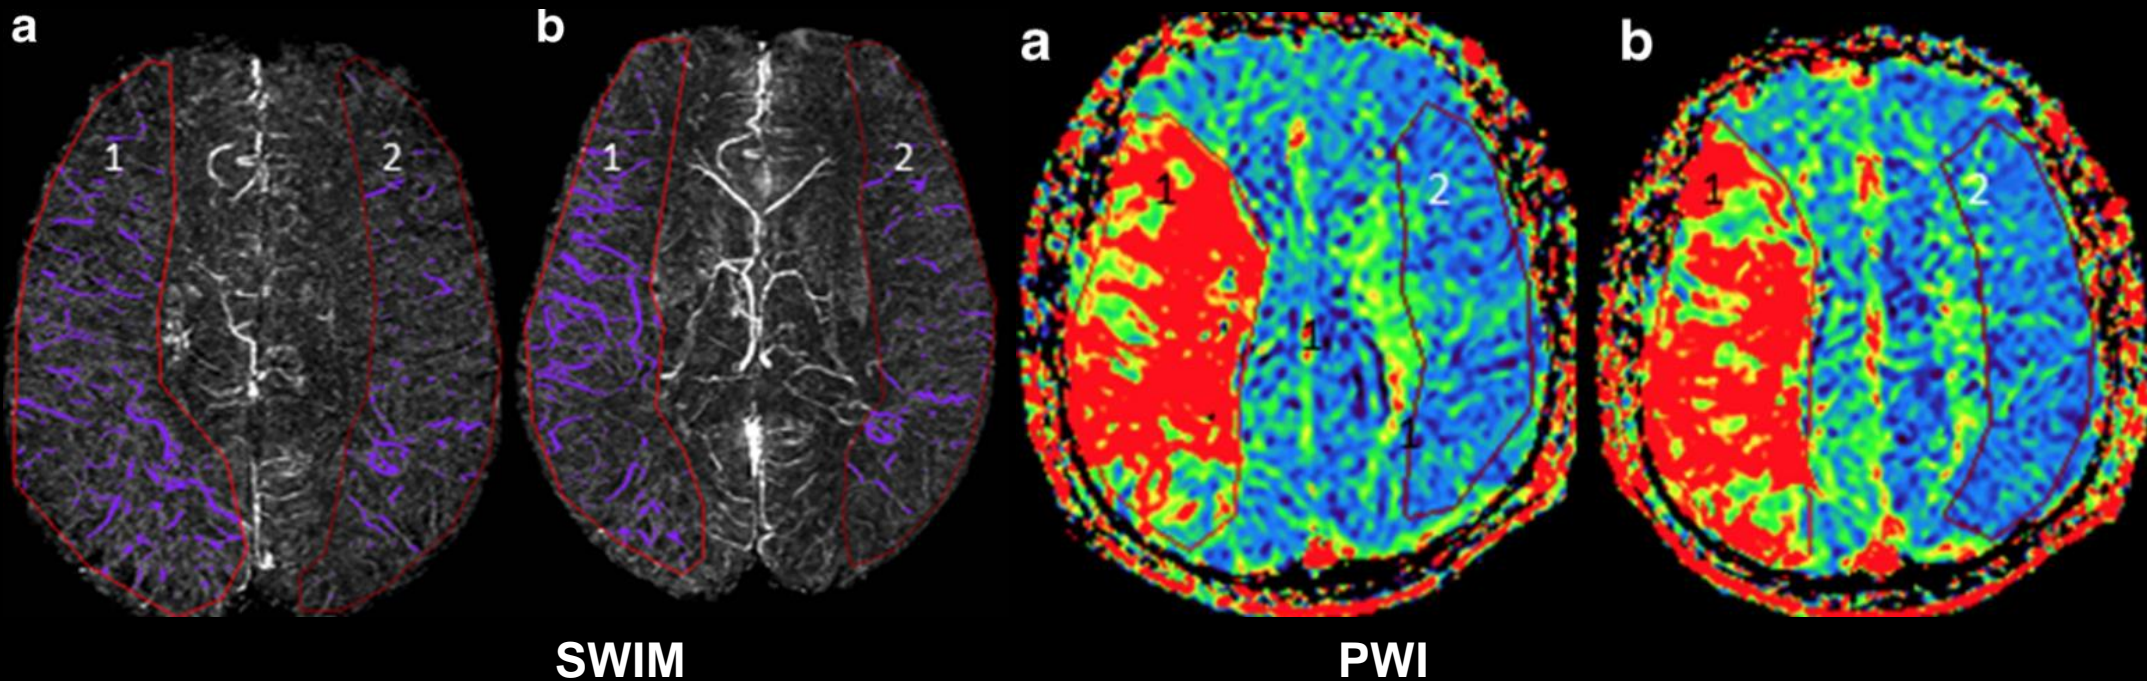

SWI

SWI: Demonstrating areas of hypo-perfusion

SWI / DWI mismatch: Ischemic penumbra

SWI mapping (SWIM) : Predicting early prognosis

Patients with Asymmetrically prominent cortical veins (APCV) tend to have worse outcomes

European Radiology, 2016

Eur Radiol

DOI 10.1007/s00330-016-4593-y

MAGNETIC RESONANCE

Increased susceptibility of asymmetrically prominent cortical veins correlates with misery perfusion in patients with occlusion of the middle cerebral artery

Today's Agenda

- **Strategically Acquired Gradient Echo (STAGE)**
- **A Length and Offset Varied Saturation (LOVARS)**

Advancement of CEST

- **Chemical Exchange- dependent**

- Saturation Transfer (CEST):**

A molecular MRI method to detect low-concentration chemicals indirectly using the water signal

Advancement of CEST

- **paraCEST** (paramagnetic CEST, Zhang & Sherry, JACS 2001; Aime et al. MRM 2002)
- **gagCEST** (glycosaminoglycans, Ling et al. PNAS 2008)
- **GluCEST** (glutamates, Cai et al. Nat. Med. 2012)
- **GlucoCEST** (glucoses, Chan et al. MRM 2012; Walker-Samuel et al. Nat. Med. 2013)

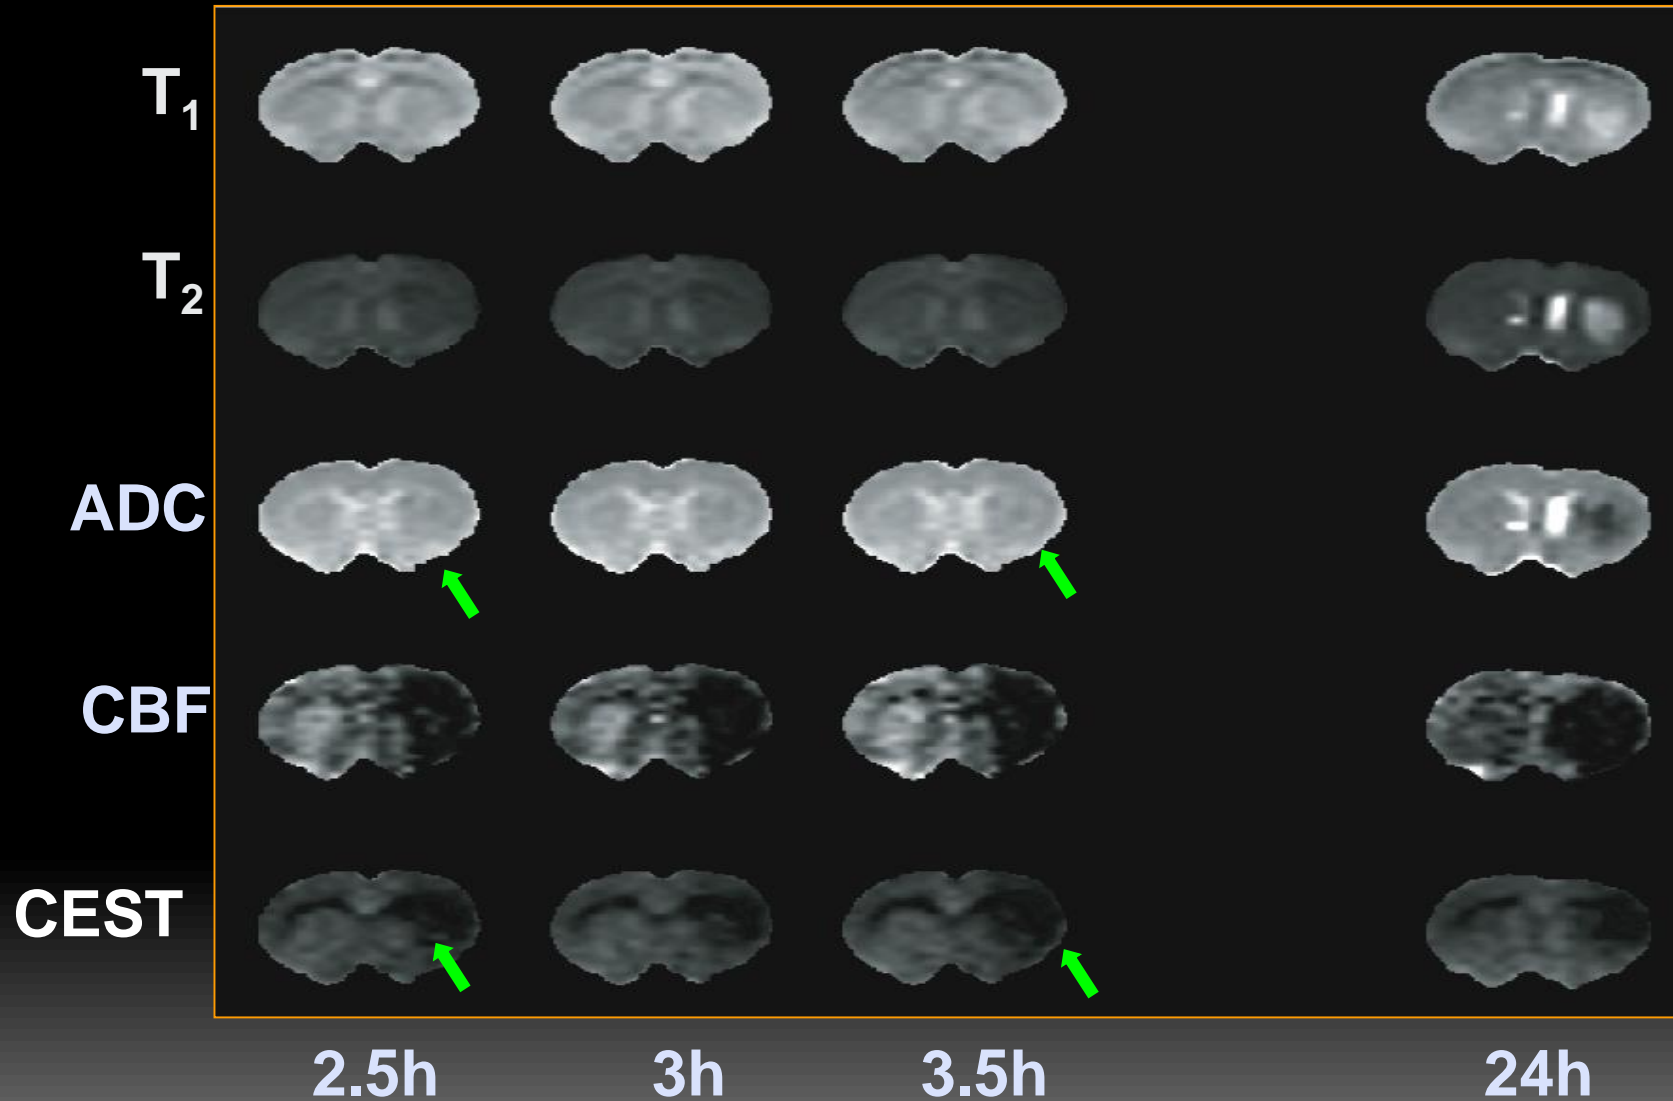

Advancement of CEST

- **Amide Proton Transfer (APT)** : Detecting endogenous mobile proteins and peptides in tissue (Zhou et al. Nat. Med. 2003)
- **Length and Offset Varied Saturation (LOVARS)** : Detecting endogenous macromolecules and metabolites in tissue (Song, et al. Nat. Comm. 2015)

APT / LOVARS in Stroke

- **Early detection** of cerebral ischemia
- **Early separation** of cerebral ischemia and intracranial hemorrhage (ICH)

MRI of acute ischemia: predict infarction

Male, 26 ys. Wake-up Stroke

DWI

APT

PWI

APT / DWI mismatch: Ischemic penumbra?

PWI / APT mismatch: Benign oligemia ?

Diagnostic process for stroke

- **CT:** Excluding intracranial hemorrhage
- **Further MRI:** Early detection and evaluation of cerebral ischemia

Time is brain

Hyperacute ICH and cerebral ischemia

Future: One stop MRI ?

- **With APT / LOVARS, one stop MRI may help to simplify the diagnostic process of stroke and improve the prognosis of stroke patients with lower cost**

Summary

- **STAGE / APT / LOVARS are non-contrast enhanced MRI techniques**
 - **Detection of hemorrhage within ischemia**
 - **Evaluation of Penumbra**
 - **Early detection and separation of ischemia and intracranial hemorrhage...**
