MULTIDISCIPLINARY TEAM FOR THALASSEMIA

Percorso Diagnostico Terapeutico Assistenziale del paziente con Beta Talassemia.

4. Obiettivo

Obiettivo generale di questo percorso diagnostico-terapeutico è il miglioramento dell'appropriatezza delle cure attraverso la definizione di programmi stabiliti dai professionisti coinvolti nell'intero percorso nell'ambito delle strutture.

Obiettivi specifici del percorso sono:

1. rendere omogeneo l'intero percorso assistenziale
2. garantire un approccio coordinato ed integrato multiprofessionale e multidisciplinare nella diagnosi e nel trattamento
3. garantire la sicurezza delle cure, la tempestiva presa in carico del paziente e la precocità dell'intervento terapeutico
4. mantenere i livelli standard proposti a livello regionale degli indicatori presenti nel capitolo 9.

I risultati attesi sono la garanzia della continuità assistenziale al paziente, il miglioramento dell'integrazione tra i professionisti coinvolti, migliorare le conoscenze e la compliance del pz. rispetto al piano assistenziale.

Terapia trasfusionale ottimale

Terapia trasfusionale ottimale

- **Quantità adeguata**
- **Alta qualità**
 - Selezione donatori
 - Lavorazione
 - Compatibilità
 - Data di donazione
